1 Base & Arm Installation

Use the M1 wrench to tighten the base bolts and affix the base to the desktop.

Once it's securely attached to the center of your desk, slide the base cover down over the base clamp.

Position post collar & quick release cable manager at the desired height and tighten it securely to the post using the clamp.

Slide swivel arm onto post first and then attach spring arm.

 (800) 207-2587

2 Monitor Installation

NOTE: Do not attempt to unfold monitor bracket before attaching it to the back of the monitor. Attach it as-is.

Affix a monitor bracket to the back of the monitor using the monitor screws provided. This can be done manually or with a flathead screwdriver.

Grasp the sides of the monitor with the display screen facing up and slide the monitor bracket onto the top post of the spring arm. Once it clicks into place, you can tilt the monitor down so the screen is facing forward.

CAUTION: Please make sure the spring arm is in the highest possible position when mounting or removing the monitor. Without the monitor weight to hold it in place, the spring arm could bounce upward and cause personal injury.

3 Monitor Arm Adjustments

CAUTION: Weight capacity requirements

The spring arm is set to hold monitors that weigh 5.5 – 9.9lb (2.5 – 4.5kg). If your monitor is too heavy (arm won't stay up) or too light (arm won't stay down), you need to adjust the tension on the bolt inside the spring arm using the M6 wrench. To reach this bolt, the arm needs to be raised until it is as straight as possible. (See illustration below.)

+ To tighten for heavier monitors, turn counter-clockwise.
- To loosen for lighter monitors, turn clockwise.

CAUTION: Do not overtighten.

To tighten or loosen your monitor's swing movement, use the M3 wrench and turn clockwise to increase the tension or counter-clockwise to decrease the tension.

4 Route Cables

5 Features and Specifications

VESA: 75x75 / 100x100

ANGLE: 100°

PIVOT: 360°

SWIVEL: 360°

PAN: 240°

TILT: 105°

EXTENSION: 23.2 in. / 590 mm

VERTICAL: 10.6 in. / 270 mm

LIFT: 5.9 in. / 150 mm

WEIGHT LOADS

ONE ARM: ≤ 19.8 lb / ≤ 9 kg

POLE MAX LOAD: ≤ 44.1 lb / ≤ 20 kg
